Nucleic acid molecule encoding mammalian phospholipid transfer protein, and its fragments, useful for diagnosis, evaluation, and treatment of diseases associated with the gene expression and for producing model

Claim 9; Fig 24; 159pp; English.

This sequence encodes a fusion protein of the invention between the Flt1

                                                                                                                                                                                                                                                                                                                                                                                                                        õ
receptor and the Fc region of 1gG. The specification relates to modified chimeric polypeptides with improved pharmacokinetics. The modified chimeric polypeptides are preferably Flt1 receptor polypeptides that have been modified to improve the harmacokinetic profile. The polypeptides can be used to decrease or inhibit plasma leakage and/or vascular

to the mammal or human. A VEGF antagonist has antipsoriatic, antiinflammatory, vulnerary, antiasthmatic, antirheumatic, antiarthritic, antiinflammatory, vulnerary, antiasthmatic, antirheumatic, antiarthritic, neptropic and ophthalmological activities. The method can be used in treating psoriasis and enhancing wound healing in humans by administering VEGF antagonist. The method is also useful in treating clinical conditions characterised by vascular permeability, oedema or inflammatory associated with injury, oedema associated with injury, oedema associated with inflammatory disorders (e.g. rheumatoid arthritis), asthma, burns, kidney diseases, or eye disorders such as age-related macular degeneration and diabetic retinopathy. The method may also be used in making the polypeptide to decrease or inhibit plasma leakage and or vascular permeability. The present sequence encodes VEGFRIR2-
                                                                                                                                                                                                                                                                     enhancing wound healing in a mammal or a human. The method comprises administering a vascular endothelial cell growth factor (VEGF) antagonist to the mammal or human. A VEGF antagonist has antipsoriatic,

                                                                                                                                                                                                                                                      This sequence encodes a fusion protein of the invention between the Flt1 receptor and the Fc region of 1gG. The specification relates to modified chimeric polypeptides with improved pharmacokinetics. The modified chimeric polypeptides are preferably Flt1 receptor polypeptides that have been modified to improve their pharmacokinetic profile. The polypeptides can be used to decrease or inhibit plasma leakage and/or vascular

The present invention describes a method for treating psoriasis and enhancing wound healing in a mammal or a human. The method comprises administering a vascular endothelial cell growth factor (WEGF) antagonist to the mammal or human. A VEGF antagonist has antipsoriatic, antiarthritic, antinflammatory, vulnerary, antiasthmatic, antirheumatic, antiarthritic, cephrotropic and ophthalmological activities. The method can be used in treating psoriasis and enhancing wound healing in humans by administering VEGF antagonist. The method is also useful in treating clinical conditions characterised by vascular permeability, oedema or inflammation, such as brain oedema associated with inflammatory disorders (e.g. rheumatoid arthritis), asthma, burns, kidney diseases, or eye disorders such as age-related macular degeneration and diabetic retinopathy. The method may also be used in making the polypeptide to decrease or inhibit plasma leakage and or vascular permeability. The present sequence encodes
                                                                                                                                                                                                                                                                                                                                                                                               Treating psoriasis and enhancing wound healing in humans comprises administration of a vascular endothelial cell growth factor (VEGF)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Seguence 1453 BP; 398 A; 400 C; 366 G; 289 T; 0 U; 0 Other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This sequence encodes a fusion protein of the invention between the Flt1 receptor and the Fc region of 1gG. The specification relates to modified chimeric polypeptides with improved pharmacokinetics. The modified chimeric polypeptides are preferably Flt1 receptor polypeptides that have been modified to improve their pharmacokinetic profile. The polypeptides can be used to decrease or inhibit plasma leakage and/or vascular permeability in a mammal

The present invention describes a method for treating psoriasis and enhancing wound healing in a mammal or a human. The method comprises administering a vascular endothelial cell growth factor (VEGF) antagonist to the mammal or human. A VEGF antagonist has antipsoriatic, antiarthritic, antinflammatory, vulnerary, antiasthmatic, antinflammatory, vulnerary, antiasthmatic, antinflammatory and ophthalmological activities. The method can be used in treating psoriasis and enhancing wound healing in humans by administering VEGF antagonist. The method is also useful in treating clinical conditions characterised by vascular permeability, oedema associated with inflammatory disorders (e.g. rheumator) as the method as age-related asthma, burns, kidney diseases, or eye disorders such as age-related asthma, burns, kidney diseases, or eye disorders such as age-related used in making the polypeptide to decrease or inhibit plasma leakage and or vascular permeability. The present encodes

The specification relates to modified chimeric polypeptides with improved pharmacokinetics. The modified chimeric polypeptides are preferably Flt1 receptor polypeptides that have been modified to improve their pharmacokinetic profile. The polypeptides can be used to decrease or inhibit plasma leakage and/or vascular

The present invention describes a method for treating psoriasis and enhancing wound healing in a mammal or a human. The method comprises administering a vascular endothelial cell growth factor (VEGF) antagonist to the mammal or human. A VEGF antagonist has antipsoriatic, antiarthritic, antinflammatory, vulnerary, antiasthmatic, antirheumatic, antiarthritic, rephrotropic and ophthalmological activities. The method can be used in treating psoriasis and enhancing wound healing in humans by administering VEGF antagonist. The method is also useful in treating clinical conditions characterised by vascular permeability, oedema or inflammation, such as brain oedema associated with inflammatory disorders (e.g. rheumatoid arthritis), asthma, burns, kidney diseases, or eye disorders such as age-related macular degeneration and diabetic retinopathy. The method may also be used in making the polypeptide to decrease or inhibit plasma leakage and or vascular permeability. The present sequence encodes Mut2:Flil(2-3 delta B)-Fc which is used in an example from the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              'n.

This sequence encodes a fusion protein of the invention between the Flti receptor and the Fc region of IgG. The specification relates to modified chimeric polypeptides with improved pharmacokinetics. The modified chimeric polypeptides are preferably Flti receptor polypeptides that have been modified to improve their pharmacokinetic profile. The polypeptides can be used to decrease or inhibit plasma leakage and/or vascular permeability in a mammal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             120

```
chancing wound healing in a mammal or a human. The method comprises
administering a vascular endothelial cell growth factor (VBGF) antagonist
to the mammal or human. A VEGF antagonist has antipsoriatic,
antinflammatory, vulnerary, antiathmatic, antirheumatic, antiarthritic,
nephrotropic and ophthalmological activities. The method can be used in
treating psoriasis and enhancing wound healing in humans by administering
VBGF antagonist. The method is also useful in treating clinical
conditions characterised by vascular permeability, oedema or
inflammation, such as Brain oedema associated with injury, oedema
associated with inflammatory disorders (e.g. rheumatoid arthritis),
asthma, burns, kidney diseases, or eye disorders such as age-related
cmacular degeneration and diabetic retinopathy. The method may also be
used in making the polypeptide to decrease or inhibit plasma leakage and
or vascular permeability. The present sequence encodes Mut3:FILI(2-3)-FC
which is used in an example from the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               'n,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         120

This sequence encodes a fusion protein of the invention between the Flt1 receptor and the Fc region of 1gG. The specification relates to modified chimeric polypeptides with improved pharmacokinetics. The modified chimeric polypeptides are preferably Flt1 receptor polypeptides that have been modified to improve their pharmacokinetic profile. The polypeptides can be used to decrease or inhibit plasma leakage and/or vascular
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 198

The present invention describes a method for treating psoriasis and enhancing wound healing in a mammal or a human. The method comprises administering a vascular endothelial cell growth factor (VEGF) antagonist to the mammal or human. A VEGF antiachmatic, antipheumatic, antiarthritic, antinflammatory, vulnerary, antiachmatic, antinflammatory, vulnerary, antiachmatic, antinflammatory, vulnerary, antiachmatic, antinflammatory, by the method is also useful in treating psoriasis and enhancing wound healing in humans by administering VEGF antagonist. The method is also useful in treating clinical conditions characterised by vascular permeability, oedema or inflammation, such as brain oedema associated with inflammatory disorders (e.g. rheumator)d arthritis), asthma, burns, kidney diseases, or eye disorders such as age-related macular degeneration and diabetic retinopathy. The method may also be used in making the polypeptide to decrease or inhibit plasma leakage and or vascular permeability. The present sequence encodes Muti.FlL(1-3 delta B)-Fc which is used in an example from the present invention
                                                                                                                                                                                                                                                                                                                  psoriasis, wound healing; Flt1 receptor; antipsoriatic; antiinflämmatory; vulnerary; antiasthmatic; antirheumatic; antiarthritic; nephrotropic; ophthalmological; vascular permeability; oedema; inflammation; asthma; brain oedema; inflammatory disorder; rheumatoid arthritis; burn; kidney disease; eye disorder; age-related macular degeneration; diabetic retinopathy; gene; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        139 ACTGAAGGAAGGAGCTCGTCATTCCCTGCCGGGTTACGTCACCTAACATCACTGTTACT 198
